ABSTRACT

Indonesia is one of the country whose population growth rate is increasing rapidly. Population growth is not balanced with the productions results, it can cause the pressures on the food sector, clothing, shelter, employment, educational facilities and so forth. The purpose of this study is to determine the perception of acceptors to the family planning programs, to know the acceptors participation and to determine the relationship between the perceptions of family planning programs participating in the Kecamatan Coblong Kelurahan Sekeloa Bandung. In this research, descriptive method of analysis through the data processing was used. It will provide means of the collected data compiled, described and then analyzed for resolving the issue. The results showed that the perception of family planning acceptors in the Kelurahan Sekeloa about family planning is good, this is indicated positive perception of people about family planning, as well as its participation, it can be said positively, can be seen from the increase in the participation is very good against family programs plans of the community. Based on the main hypothesis testing showed that there are no relationship between the perceptions about family planning acceptors with its participation in the Kelurahan Sekeloa. From the results of this study, it can be concluded that the better perception of acceptors of family planning program will give better participation.
