

ABSTRACT

The title of this research is the Problem Based Learning Model Application Of Learning Outcomes In Subject Entrepreneurship (Case study Accountancy Class XI at SMK Negeri 1 Purwakarta Bojong). The purpose of this study was to determine student learning outcomes using problem based learning models with models that do not use problem-based learning. This study uses a quasi-experimental design with posttest Only Design With Nonequivalent Groups. The sample in this study using purposive sampling that is class XI Accounting 2 as the control classes of 33 students and class XI Accounting 3 as experimental class of 33 students. The results showed that there is a problem based learning model application on student learning outcomes. It is seen from the results of data processing using SPSS 18.0 for windows. The results showed that the average variable Y 83.78% which means that students perceive the learning model is going well, and the average variable X 78.93%. The results of hypothesis shows the application of problem based learning model of normal distribution because of greater than 0.05, which means the application of problem based learning model of influence on student learning outcomes. It shows students agreed that the model of problem based learning can improve student learning outcomes. As the end of the study authors gave suggestions to the teachers of entrepreneurship in order to create a learning atmosphere that can provide opportunities for students to play an active role in the learning process. Model problem based learning can be used by teachers in the learning process because it has benefits for students to further build up the students to be able to think critically in groups and not based understanding penghapalan.
