ABSTRAK

ASSEMBLING AUDIO VISUAL BASE OF MOVIE MAKER LEARNNG MEDIA TO STUDENT'S STUDIED OUTPUT IN SMAANGKASA LANUD HUSEIN SASTRANEGARA (ecperiment study in economic subject X grades IIS and X MIA grades). the problem of this research is student's studied output in economic subject are low with average output are bellow minimum completeness criteria (KKM. Aiming the research are: 1 to find out does it has deffrence pretest output in control class and experiment class, 2) to find out does it has deffrence posttest output in control class and experiment class, 3) to find out is increasing studied output in class experiment better than class control.

The research method is quasi experiment and used quasi experiment design, with nonequvalent control qroup design type. Result of the data process came from posttest oytput with multiple choices type

Result of research posttest output indicate distinction of studied output 56,63 for experiment class and 52,00 for control class. From above calculation has $t_{hitung}=3,653$ profert $t_{table}= 2,055$. If inputing in hypothesis abbreviation $t_{hitung}>t_{table}$ with the result that H_o refusing and H_i accepteing.

Student's studied output among X IIS who used peer tutoring learning method is better than student X who used konvensional method. From the research's result peer tutoring method recommended and could increase studrnt's studied output as good as be alternative in accounting learning activity
