ABSTRACT

The aim of the observation is to develop the second grade students' confident and learning achievement by using *Discovery learning* model on the sub theme of Sun (Matahari), This observation based on the lack of students' confident which influences the low of students' learning achievement through the material. The design of this observation uses action class research Model which has two cycle. Each cycle includes planning, implementing, observing and reflecting steps. The results of the observation show that there are some progress of students' confident and learning achievement which is shown from students' test result. The first test data shows the average of students point is 2,33, the posttest result cycle I is 2.43, This data proves that there is a progress from the first test to posttest cycle I. In the cycle II shows the significant progress, the average point students' point is 3.21 While on confident assessment on learning activity cycle I, students' average point is 2,58 and on cycle II the students' average point become 3.14. Observation data based on questioner form are on the cycle I, the average point of all students' questioner is 2.97 and can be categorized as Good. However, it has not achieved the target yet that is 85%. That is considered unsuccessful. Whereas in cycle II it increases, it becomes 3.24 and it categorized as very good and it has achieved the target that is 85%. The impact of the uses of Discovery learning model can be seen from students' learning activity. The students have more spirit and active on discussion and on using learning media. The student's response through the learning more effective. It can be concluded that there are some progress on the students' confidence and learning achievement by using Discovery learning Model. This result that can be seen from the first test result to the post test cycle I and post test cycle II shows the good progress.

Key words : Confidence, Learning Achievement, Learning Discovery Model.
