The study, entitled the use of the model problembased learning to foster self-confidence and curiosity and learning outcomes, agains the background of existing problems in the field that the learning outcomes of students who have not met the KKM predetermined resulting in low attitude of confidence and curiosity and learning outcomes. This is caused by teachers who are still using conventional methods or methods of lectures during the learning. This study design using PTK models consisting of two cycles. Each cycle consists of planning, action, observation and reflection. The results showed an increase attitude is confident the first cycle of 64% and the second cycle by 91% while the curiosity of the first cycle of 62% and the second cycle of 92%, as well as the study of students also increased with the passing of the meeting. The conclusion from this study is that the application of the model of Problem Based Learning can foster an attitude of confidence and curiosity as well as the study of students at Sub Scene Scene Mutual grateful for diversity in Class IV SDN ASMI Bandung. Learners also shows the attitude / positive response to the process of learning to use your model of Problem Based Learning. So, the application of the model of Problem Based Learning can be an alternative learning models to be applied to the learning.
