ABSTRACT

The research entitled "The Use of Course Review Horay method to improve the results of student learning in science lessons in class V SD Land Bojong 1." backdrop from the lack of student learning outcomes for students less plays an active role in the learning process, an average of the results of student learning has not yet reached the KKM as many as 4 people or as much as 15.4% from 26 students. This research aims to improve the results of student learning. The research that is used is the Class Action Research that consists of two cycles of. Now, stages each cycle consists of planning phase, implementation, observation and reflection. Based on the analysis of the data the research results obtained at cycle II the number of students who achieve KKM rose as much as 24 people or 93.6 percent so it can be concluded that the use of course review horay method can increase activeness and the results of student learning in grade 5 in the matter of respiratory system man. Thus the course review horay method can be one of the teaching methods that are applied on the teachers in the classroom learning activities in order to increase activeness and the results of student learning.

Keywords: The method course review horay, Learning results, Science lessons.
