

ABSTRACT

Library as one of the providers of information whose existence is very important, especially in education, development of library never be separated from the development of science and technology information. This is because the library is very closely related to science and technology information. All three support each other, the library contributes to the store of knowledge through a variety of information and historical development of science, information technology while providing support to the ease of access and information systems in a library. As the development of information technology, especially in the field of networking and the Internet is a resource that can help ease the traffic information including in the field of library. This development requires the perpetrators of the education to continue to develop an information technology in the field of library namely Digital Catalog.

Faculty of Creative Industries in which there are libraries where libraries have difficulty in managing the data collection library. To overcome these authors conclude that is necessary to Digital Cataloging must accommodate the above problems
