

## ABSTRACT

With the enactment of the regional autonomy policy which began in 2001 demanding South Bangka Regency to independently manage its territory, other things also demanding the economic development of South Bangka regency, so South Bangka Regency is able to fund independent, and capable of improving welfare. The limitations of local government funds makes South Bangka Regency is not possible to be able to develop all economic sectors simultaneously in the development of its territory. For the efficiency needed an understanding of what the sector should be prioritized in the development region South Bangka Regency. Therefore, it is necessary to prioritize of the development of potential economic sectors in South Bangka Regency.

In determining priority potential economic sector development of South Bangka Regency used several methods of analysis such as the rate of economic growth (LPE), the contribution of economic sectors, analysis locational quotient (LQ), shift-share analysis, multiplier effect analysis and analysis of land productivity. Furthermore, multi-criteria analysis using the method of distribution approaches which do count Sturgess classification and assigned three types of classification that are potential sector, the sector has enough potential and thus less potential sectors so it get the las result the each potential economic sectors of district.

Based on a series of analyzes were conducted to obtain the results of potential sectors in the South Bangka Regency such as electricity sector, gas and water supply for priority development in the district Toboali, transport and communications sector to development priorities in the District Lepar Pongok and the manufacturing sector to development priorities in the District Toboali .
