ABSTRACT

The text of the observation report is a text that conveys information about things as they are as a result of systematic observation and analysis. In relation to that the authors are interested to conduct research on "Learning to review the structure of language and text content of observation reports in the form of a book of knowledge by using the model Two Stay Two Stray in the seventh grade students of SMP Pasundan 2 Bandung Lesson Year 2017/2018". The authors formulate the problem of the proposed research, namely: 1) Can the authors plan, implement, and assess learning review the structure of language and the contents of the text of the observation report in the form of a book of knowledge by using the model Two Stay Two Stray in the seventh grade students SMP Pasundan 2 Bandung?; 2) Can the students of grade VII of SMP Pasundan 2 Bandung review the structure of language and the content of the text of the observation result in the form of a book of precise knowledge?; 3) Effective Two Stay Two Stray model is used in learning to review the structure of language and the contents of the text of observations in the form of a book of knowledge on students of class VII SMP Pasundan 2 Bandung? The method used by the authors is a quasi-experimental research method with research techniques literature study, observation, testing, tests and analysis. There are also the results of his research are: a) The author is able to plan, perform, and assess learning to review the structure of the language and the contents of the text of the observation report using two stay two stray model in the seventh grade students of SMP Pasundan 2 Bandung. This is evidenced from the results of learning planning value of 3.8 and the value for the implementation of learning of 3.9 with an accumulative average of 3.85 value is included in the category very well. b) Grade VII students of SMP Pasundan 2 Bandung able to review the structure of language and the contents of the text of the report in the form of a book of knowledge with precision. This is evident from the average value of pretes is 12.1 and the average value of postes is 91.4 Thus, there is an increase of 79.3. c) Two Stay Two Stray model is effectively used in the process of learning the text of the observations of students in grade VII SMP Pasundan 2 Bandung. This is evident from the results of statistical calculations with $t_{count} > t_{table}$ ie 45.5> 2.06 at 95% confidence level, and db of 24. Based on data generated from the study, the authors concluded that learning to review the language structure and text content report the results of observations in the form of a book of knowledge using the Two Stay Two Stray model on the seventh grade students of SMP Pasundan 2 Bandung succeeded well.

Keywords: Learning, studying, language structure and text content of observation report, Two Stay Two Stray model.
