ABSTRACT

Poetry is an art of writing. The author formulates the problem regarding the proposed research, namely: 1) Can the authors plan, implement, and assess learning to write poetry using natural media around in class X SMK 3 Bandung? 2) Can the students of class X SMK 3 Bandung write poetry with elements of the builder? 3) Effective the surrounding natural media used in learning to write poetry in class X SMK 3 Bandung? 4) Are there differences in the results of learning to write poetry in grade control using visual media, with the results of learning to write poetry in class experiments using natural media around? 5) Which is more effective learning outcomes writing poetry in control classes using visual media, with the results of learning to write poetry in class experiments using natural media around. The method used by the author of true experimental method desingn with research techniques literature study, observation, testing, and test. The results of the research are: 1) the author is able to plan, implement, and assess learning to write poetry in class X SMK 3 Bandung with a value of 3.67 which is categorized very well; 2) students of class X SMK 3 Bandung able to write poetry, can be evidenced from the average value of the pretest, which is 67.41 while the average post-test score 83.10. These results prove that the writing ability of students has increased; 3) the nature surrounding media effectively used, can be evidenced by the gain index data results, the results obtained in the experimental class the majority of respondents in the category was 48.29%, while the control class respondents in the low category 72.43%. 4) Regarding the differences in learning outcomes of data pretest experimental class finds the total in 1955, and the average score of 67.41. Pretest the control class finds the total in 2045, and the average score of 70.52. then the data postes the experimental class, the total value in 2410, and the average score of 83.10, while the control class finds the total in 2015, and the average score of 69.48. 5) The results of two test average with the Mann-Whitney test obtained significant results for 0000 <0.05 then Ho is rejected and Ha accepted, so it can be concluded that the ability of learners who use natural media about a significantly better compared to the visual media.
