

ABSTRACT

The title of this study "Understanding About Learning Tools In Micro Teaching To Preparing Practices Teaching Students FKIP Unpas. (Survey On Students Faculty of Teacher Training and Education University of Bandung Pasundan Force 2014) ". This research is based on the fact that there are still students who are less confident in carrying out teaching activities in the field and lack of understanding about learning planning.

This research uses quantitative approach while the method used in this research is survey. Subjects in this study used a sample of 247 students. Data analysis used is descriptive analysis and verification data through the calculation of mean (mean) score, simple linear regression and coefficient of determination with the help of SPSS 24.0 for Windows.

Result of research by using descriptive analysis obtained recapitulation average score responder responses about comprehension about learning device equal to 3,30 (66,11%) is in category "understand", while the readiness of teaching student equal to 3,64 (72,79%) are in the "good" category. Based on the analysis of data verifikatif has been obtained obtained Coefficients simple linear regression ($Y = 15,000 + 0,495X$) can be explained if there is an increase of 1 on the variable understanding of learning devices will increase the readiness of teaching of 0.495. While the contribution of influence given by variable of learning device to student's readiness variable based on result of coefficient determination calculation is 21,00%, while the rest equal to 79,00% influenced by factors outside variable of understanding about learning device, and conclusion acceptable.

As the end of the study, the authors convey the suggestion for the students in carrying out the teaching activity of micro teaching is expected to develop the teaching technique and able to make the learning take place interactively, inspiration and fun for the lecturer, should provide the latest information and knowledge about instructional tools, for LPTK expected conducting activities or programs that are capable of developing the understanding and competence that must be possessed by prospective teachers in preparing themselves to carry out teaching practice activities and for other researchers in the field of education can conduct research similar to the variables or objects of different research in order can be known other factors that affect the readiness of teaching students.
