

## ABSTRACT

This research entitled: “The Role of Peer Counselor in Overcoming Teenager’s Reproductive Health Problem at PIK-R Formasi Batujajar Sub District, Bandung Barat Regency”. PIK-R is an information center and counseling for teenagers under supervised by BKKBN (Family Planning Board of Republic of Indonesia). The aims and purpose of this research were:

1. To describe the role of peer counselor in overcoming teenager’s reproductive health problem.
2. To identify various factors that influence the role of peer counselor in overcoming teenager’s reproductive health implementation.
3. To identify several effort due to overcome barrier on peer counselor in overcoming teenager’s reproductive health.
4. To describe practical implication of social work intervention on peer counselor in overcoming teenager’s reproductive health.

The research method employed a qualitative approached which relied largely on the interpretative and critical approaches to social work science. The data gathering used a documenting real events, recording what informant said (with words, gestures, and tone), observing specific behaviors, studying written documents, and participant observation. In this research, the number of informants were 7 teenagers related to reproductive health counseling. Research finding showed that role of teenager in counseling on reproductive health still weak due to system which could not easily be accessed by them. The group dynamic was very important component in reproductive health counseling because the discussion within group will cover reproductive health, and addresses the reproductive processes, fuctions and system at all stage of life, however this condition also still weak. Recomendation went to BKKBN in order to create a synergy program for synergy health between PIK-R, Official Staf of reproductive health at Batujajar Sub District and DP2KBP3A to build the data integrity based on digital online related to overcome reproductive health of teenagers.
