

## ABSTRACT

**Fris Pratama Pischesa., Single Parents On parenting Toddlers in urban-Village Babakan Sari Bandung. Faculty of Social and Political Science University of Pasundan Bandung**

Scientific works contains an overview of the results of the research on single parents On Parenting Toddlers in Village Babakan Sari Bandung. This research aims to give an overview in General about: 1) characteristics of the informant; 2) roles that run single parents in parenting; 3) guidance provided single parents in the upbringing of the child; 4) Supervision provided single parents in the upbringing of the child; 5) experience provided single parents in the upbringing of the child; 6) Barriers single parents in the upbringing of the child; and 7) expectations of the single parents in childrearing.

To obtain data about the object of research of qualitative approaches used by using descriptive methods with the aim to describe in detail about upbringing of single parents of toddlers through interview techniques depth to 10 informants i.e. single parents, observation and study of documentation.

The results of the research on the pattern of parenting single parents of toddlers show that single parents are less effective in the running pattern of childrearing. This is because single parents feel difficulties in dividing time between working and taking care of his son.

Obstacles perceived by researchers is the difficulty met by single parents, because every day is at work and there is only on when new working holiday can meet with single parents.

Based on the results of the research, then the program proposed to address this problem is the "**Programing Parenting Skill with Educational Group in the village Babakan Sari Bandung**". The program is expected to increase the awareness, knowledge, and skills of single parents in providing caregiving patterns in young toddlers. The targets of the program i.e., single parents. In practice, this program needs to cooperate with various parties, including: community leaders, social workers, cadres of Maternal and Child Health Services, Chairman of the RT/RW and the village. Methods and techniques used in the program is social Group Work, namely Group Counseling techniques, Logical techniques Group Dynamic Activities, Discussion, and Role Playing.
