## **ABSTRACT**

This study aims to see how much influence the parents always bring children to school about their self-confidence. Based on preliminary observations in some of the District Primary Schools in Cibatu District, most of the parents were identified to always deliver their children to school. This study aims to 1) To know the child's development if always accompanied by parents. 2) To find out how much influence parents have who always take their children to school against children's self-confidence. 3) To find out the motives of parents in taking children to school. this research uses quantitative method with descriptive analysis type. This research was conducted at SDN I Selaawi, SDN I Cirapuhan, SDN III Mekarsari, SDN 3 Pasirwaru, and SDN 2 Pasirwaru District Blubur Limbangan with a population of 681 students. The sample collection technique uses Probability Sampling with the type of Simple Random Sampling based on the Sugiyono table with a significance of 5% so that a sample of 159 students is taken. Data collection was carried out using questionnaire instruments, documentation and interviews. Test the questionnaire instrument using validity and reliability testing 30 items based on the correlation between parents' variables in delivering children to school with student confidence of 0.486 with a significance value of  $0.000 < 0.05$ , with an average percentage of 69.9%. In self-confidence get a score of 79% with details of the percentage of respondents' answers to 4 dimensions regarding the variable of confidence, the highest score percentage of 79% is in the dimensions of confidence in self-ability, and the lowest score percentage of 20.3% is in the objective dimension.
