ABSTRACT

Learning summarizing the content of explanatory text in this study used writing skill. Learning summarizing or a to summarize is one of the effective methods to provide an essay in a short form. Summarizing activity is the way to make the original essay become shorter, more dense and concise in the written form. In this study, the researcher used generative method. Generative learning theory is an explanation of how a student builds knowledge in his/her mind, such as building ideas about a phenomenon or building meaning for a term. Therefore, the researcher is interested in conducting this research because this method is suitable for solving problems in learning summarizing the contents of explanatory text. The researcher proposed several problems as follows : Can the researcher plan, implement and assess learning summarizing contents of the explanatory text to eighth grade students of SMP Pasundan 3 Bandung in the academic year 2019/2020?, How do students' abilities in learning summarizing the contents of explanatory text in the experimental and the control class?, Is there any difference result of students' learning in learning summarizing the contents of explanatory text in the experimental and the control class?. The following is the result of the research : The researcher was able to plan, implement, and assess learning summarizing the contents of the explanatory text at eighth grade students of SMP Pasundan 3 Bandung in academic year 2019/2020, it was proven from the results of the teacher's assessment of the researcher, students are able to learn summarizing the contents of the explanatory text, this was proven by the score improvement from the pretest to posttest, and the differences of students' learning result in the experimental and control class, it was proven from the results of the pretest score obtained from the results of independent sample t test that has been analyzed using the SPSS application.

Key words : *Summarizing, writing, content, explanatory text, method, generative*
