ABSTRACT

Short stories learning in proportion to writing skills, one of them is larning to construct an element that build in short stories using windows movie maker that designed for make it easier for the students in instruction parts of the elements. Related that, the researcher interested doing research study for construct a short stories using for windows movie maker on students XI SMK Mitra Karya Bekasi regency the school year in 2019/2020. As for the results of the research are as follows: 1) researchers are able to plan, implement, and evaluated learning to constructs the short stories using windows movie maker; 2) the students are able to follow learning which can be proven on the value of posttest and prates that has been obtained. learning results in the experimental class obtained an average of 36,62 and posttest results with an average of 67,25 while the average prates in the control calss was 12,50 and posttest score obtained a value of 56,62 ; 3) the use windows movie maker is the effective for learning to construct the short stories. that can be proved on a hypothetical test using independent sample test program and indicate the significant value is 0,004 and 0,004 (0,004 and 0,004 < 0.05). That means there is a difference in the increase of the learner's learning between the experimental class and the control class. The next, for meansure the effectiveness use windows movie maker mediator can be seen n-gain velues between experiment class and control class. N-gain value of experimental class reached 0,83 whereas value of control class reached 0,423. This suggest that the n-gain of experimental class that use windows movie maker mediator more high than the control class that isn't use windows movie maker mediator

Keywords: Mediator windows movie maker, learning, writing skills, construct an element, that build, in short stories
