ABSTRACT

Basically learning is a process that is not easy because it not only absorbs the information conveyed by the teacher to students, but adequate facilities and infrastructure to achieve an optimal learning and get a good understanding and learning outcomes. The purpose of this study was to determine the effect of the completeness of facilities and infrastructure on student learning outcomes. The population of this research is fifth grade students at SDN located in Tarumajaya Village, Kertasari Subdistrict, Bandung Regency. By taking samples of five SDNs by calculating the population of many students then the sample was concluded. This research is a quantitative descriptive study so that the data are analyzed to determine the effect of the completeness of facilities and infrastructure on student learning outcomes. Data collection instruments used documentation, questionnaires, interviews and observations which were then analyzed using simple linear regression correlation, normality test, and t test. The results obtained are that there is a significant influence between the completeness of facilities and infrastructure on student learning outcomes.

Key words: Facilities and Infrastructure, Learning Outcomes
