## **ABSTRACT**

This study entitled "The Influence of Learning Motivation Towards the Learning Outcomes" was motivated by the low learning outcomes in Mathematics in class IV in several Elementary Schools in Buah Batu cluster 36 City of Bandung. This is due to lack of motivation to learn by the teacher during the learning process. The method used in this research is descriptive method with quantitative research design. The population in this study were all fifth grade students of SD Negeri in Buah Batu Gugus 36 district of Bandung City as many as 133 students. Sampling using Proportional Random Sampling technique with an error rate of 5%, as many as 79 samples were obtained. The research samples obtained by 3 schools in the Subdistrict of Batu Batu Group of 36 Bandung, namely, SDN 242 Margasari, SDN 230 Margahayu Raya and SDN 129 Rancasawo. The research instrument used in this study was to use observation sheets and questionnaires. Based on the results of the study concluded: 1) SDN 242 Margasari obtained a total score of 252 and included in the high category, SDN 230 Margahayu Raya obtained a total score of 304 and included in the high category, SDN 129 Rancasawo obtained a total score of 380 and included in the high category .2) The average value of SDN 230 Margahayu Raya is (70.71), SDN 242 Margasari is (75.34), and SDN 129 is Rancasawo (71.90). 3) The influence of learning motivation on student learning outcomes in each school through testing conducted using simple linear regression, namely at Margasari 242 primary school obtained a significant value of 0.008 <0.05, at 230 Margahayu Raya elementary school obtained a significant value of 0.000 <0.05 , then at the Rancasawo 129 Elementary School, a significant value of 0.000 <0.05 was obtained. From the results of the significance data above, it can be concluded that there is an influence of learning motivation on student learning outcomes.
