ABSTRACT

Learning motivation is an important thing that students must have for the success of their learning. Motivation to learn is influenced by several factors, one of them is the facilities / facilities and infrastructure available at school. The purpose of this study is to determine the effect of facilities / infrastructure and on student motivation. The research method used is quantitative descriptive. Sampling using Proportional Random Sampling technique, 98 samples were obtained in class V. The research samples obtained by 3 schools in Buah Batu Gugus District 36 Bandung City are SDN 131 cijawura, SDN 261 margahayu raya, and SDN 230 margahayu raya. The research instrument used in this study was to use observation sheets and questionnaires. Based on the results of the study concluded: 1) Facilities / facilities and infrastructure support the continuity of learning in schools. 2) The average motivation of students in SDN 131 schools was 52.4, the results were included in the good category, SDN 261 margahayu raya block I with an average of 76 results included in the excellent category, then SDN 230 margahayu raya with an average of 75, the results are included in the excellent category. 3) There is an influence of facilities / infrastructure and infrastructure on the motivation of students in each school through testing conducted using simple linear regression, namely in SDN 131 cijawura schools obtained a significance value of 0.36 <from 0.05, at SDN 261 margahayu highway block I obtained a significance value of 0.11 <from 0.05, then at SDN 230 margahayu raya obtained a significance value of 0.40 <from 0.05. From the results of the significance data above, it can be concluded that there is an influence of school facilities / infrastructure on student motivation.

Keywords: learning, facilities, motivation
