***ABSTRACT***

*This study aims to analyze student learning outcomes through the Problem Based Learning model. The research method used is descriptive qualitative analysis with this type of research, namely the literature study of the results of previous research. Collecting data in this study is by collecting and reviewing various literatures, both through books and previous research journals that are related to student learning outcomes through Problem Based Learning. The researcher took and analyzed 12 research journals on the Problem Based Learning model and the learning outcomes of elementary school students as primary data, while secondary data used books, article, and relevant previous research journals. Based on the research results reviewed,*
