ABSTRACT

Anjas Jasmiyanti. 165010005. The Effect of Learning Motivation on Improving Student Learning Outcomes in PPKn Subjects.

This study aims to determine the effect of learning motivation on improving student learning outcomes in PPKn subjects in Pasundan 4 Junior High School Bandung. This research uses a quantitative approach while the method used in this study is descriptive. Analysis of the data used is descriptive analysis, verification of data through means of calculation, simple linear regression and coefficient of determination with the help of SPSS version 25.0 for windows. Based on the results of data processing, obtained an average score of learning motivation of 52.50 with a percentage of 35% is in the sufficient category. While the average score of learning outcomes of 35.54 with a percentage of 53% is in the sufficient category. Obtained this hypothesis test using a simple linear regression test, it can be seen the significance value (Sig.) 0,000. Where 0,000 is smaller or less than 0.05, H0 is accepted and H_a is rejected, (significant) Learning Motivation variable (X) against Learning Outcomes variable (Y). This means that Ho: pyx = 0 is rejected and Ha: pyx ≠ 0 is accepted where there is an influence of learning motivation towards increasing student learning outcomes. And also obtained Obtained coefficient of determination (R Square) of 0.397 which implies that the influence of independent variables namely Learning Motivation (X) on the dependent variable ie Learning Outcomes (Y) is 39.7% and the rest is influenced by other variables. So that the end of the study, the authors submit suggestions to educators or teachers of Pasundan 4 Junior High School Bandung expected to be used as a source of information, especially in increasing learning motivation towards student learning outcomes as input in an effort to improve the quality of learning through improvement in the learning process.
