ABSTRAK

This research has the most important problem, namely the low learning outcomes of students. The purpose of this study is to find out the truth that the project based learning model can improve student learning outcomes in elementary schools. The research method used in this research is the literature study method which is a qualitative descriptive study with the main journals used as material for the author's study of 12 journals about student learning outcomes using a project based learning model. Based on the results of research from several previous research journals, it shows that the learning outcomes of the project based learning model increase due to the emergence of students' skills in learning such as cooperation, freedom of opinion, decision-making in problem solving and curiosity. However, several other journals show that the project-based learning model raises several obstacles, namely the need for skilled teachers to become facilitators and be able to manage the class because during learning it is possible for students to have a commotion because of the high curiosity in making projects and there are students who are not easy. receive the material provided. Therefore every teacher must understand the steps of each learning model. In conclusion, the concept of the project based learning model is a learning model that fully involves students in working on a project and producing a real product. The characteristics of this model are that it emphasizes the skills, knowledge, develops ideas and seeks information. So that you get new knowledge and skills in learning. But it requires adequate facilities and equipment. The learning outcomes of students with the project based learning model have an influence, this is reinforced by journals regarding the project based learning model which affects the learning outcomes of students.

Key Words: *Learning outcomes, Project based learning model, Students.*
