The background of this research is the low learning outcomes of students in thematic learning, this study aims to analyze the effect of the Problem Based Learning (PBL) model on learning outcomes in thematic learning in fifth grade students of SD Negeri Pringsewu Selatan.

This type of research is quasi experimental research. The population in this study were all class V SD Negeri Pringsewu Selatan consisting of classes VA, VB and VC with a total of 81 students. Sampling was done by using probability sampling techniques. The probability technique used in this research is simple random sampling. After sampling by shuffling, the selected class was class VA as the control class and VB as the experimental class.

Based on the research, it shows that there is an effect of learning outcomes on thematic learning using problem based learning models with conventional learning models for fifth grade students at SD Negeri Pringsewu Selatan.
