**ABSTRACT**

This research is motivated in the psychomotor aspects of students through the Problem Based Learning Model. This study involves students learning to do problem-solving activities to validate what students can think. The lecture method is a method in education in learning, a way to convey the meaning of teaching material to students carried out orally by the teacher in the classroom, using teaching aids to explain the descriptions conveyed to students. This lecture method is often seen in the learning processes at the low level to the tertiary level, so that the lecture method like this is considered a good method as it is considered the best method for teachers to interact with students in teaching. One learning model that can be applied is the Problem Based Learning learning model. Students will be more active or focused if each teacher's learning provides affirmation in learning activities.

Keywords: Problem Based Learning Model on Psychomotor aspects.
