ABSTRACT

This research was motivated by the Covid-19 pandemic, where learning was carried out online and carried out at their respective homes, so that like it or not, parents must play an active role in children's education to be able to increase learning motivation. But the fact is that during covid-19 most of the parents were busy with their work and there were also parents who stuttered about technology because of their lack of fluency, causing the low role of parents in motivating their children to learn. The purpose of this study was to examine the literature study on the role of parents in increasing students' learning motivation in online learning in elementary schools. The data collection techniques used were editing, organizing, and finding. Data analysis techniques were carried out inductively and interpretively. The results showed that parents' efforts to motivate their children's learning can be seen from the way parents make good study schedules, create a pleasant atmosphere during learning, always pay attention and take the time to be able to accompany children in online learning, and facilitate all learning complements. children, and giving rewards to children's increased learning achievement by giving gifts and praise that make children feel proud and want to study harder. The conclusion of this study is the role of parents who have high enthusiasm to be motivated to learn and develop children's learning abilities will have a good impact on children, especially during the current covid-19 pandemic, children really need the role of parents to foster interest. learn them through lessons that will be taught at home.
