ABSTRACT

Digital learning is one of the learning tools that must be owned and used by teachers when teaching today. With digital learning, learning will be more interesting, more interactive, fun and easily understood by students. The application of Digital Learning with learning outcomes is to increase students' understanding of the material presented by the teacher. This study aims to determine the relationship between digital learning and elementary school student learning outcomes. This research uses the literature study method (Study Literature). Data collection techniques in this study were done by *editing, organizing, finding*. The data analysis used in this research are *inductive, deductive, comparative, interpretive*. Based on the results of the analysis obtained by the author that Digital Learning in Improving Learning Outcomes as a learning medium in the teaching and learning process can improve student learning outcomes in elementary schools.
