ABSTRACT

This research was conducted to determine student learning outcomes using audio-visual media. The purpose of this study is to determine the increase in student learning outcomes by using audio-visual media. The background of this research is based on the problems that occur in learning activities where teachers who still use conventional learning are still fixated on books, and teachers have not used learning media in learning activities so that learning seems monotonous. This study uses a qualitative method with the type of library research, namely library data collection methods, reading, recording and processing research materials. The focus of the research analyzed in this study is the use of audio-visual media to improve student learning outcomes from the results of previous research from various experts. Based on the results of research from several previous journals, it shows that the use of audio-visual media can improve student learning outcomes.
