ABSTRACT

Attention Parents have their own way of educating their children, because parents are the closest people to children who can form a behavior to be a good child, provide religious education, personality and habits and provide proper education for their children. The learning outcomes that will be achieved by children can be influenced by two factors, namely internal factors and external factors, where internal factors are from within themselves and external factors are one of the parents. This study aims to determine the effect of parental attention on children's learning outcomes in elementary schools. This research is motivated by problems that arise where the lack of attention given by parents and causes low learning outcomes under the KKM. This research uses the literature study method (Literature Study). Literature study is a research carried out by collecting information and data taken from various existing materials such as documents, supporting books, journals and other relevant sources. Data collection techniques in this study were carried out by collecting data and analyzing data. The data analysis used in this research are deductive, inductive, interpretative, and comparative. The results of the analysis obtained by this author get information where the Effect of Parental Attention has a significant and positive influence on children's learning outcomes in elementary schools.

Keywords : *parents attention, learning outcomes, primary school children.*
