ABSTRACT

This study aims to determine what factors influence coal exports in Indonesia. This study uses quantitative research methods used was a regression model. The result of this study indicate that partially the coal production variable has a significant positive effect, the international coal price variable has an insignificant negative effect, the liquefied natural gas price variable has a significant positive effect, the exchange rate variable has a positive and insignificant effect on the volume of exports to the world in 2002-2019. However simultaneously these variables have a significant influence on the volume of Indonesian coal exports throughout the world in 2002-2019.

Keywords : Indonesian coal export volume, Indonesian coal production, International coal prices, liquefied natural gas prices and exchange rate
