

ABSTRACT

Learning is a driver in science and innovation. Mentioned in Law no. 20 of 2003 concerning the national education system in article 1 explains that unconscious efforts to create an atmosphere of spending can run effectively and grow their ability to speak in depth, wisdom, and insight. Google Classroom really makes it easy for teachers to quickly and systematically teach students. With the Google Classroom application, it can provide convenience for students in the shopping process, this happens with information about how to use Google Classroom in shopping exercises so that it can make an innovation that is very useful in the educational space. In this study, researchers chose SMA NEGERI 1 RAJAGALUH because they could see the impact of users of this application on the results of PPKn spending using Google Classroom. In the Civics lesson there will be the application of Google Classroom to provide an initial step in facilitating spending as well as innovation in a teaching and learning activity that is with online shopping situations in the Covid-19 situation, to the point where this planning is shown to students in utilizing modernization with information technology. With this, there is the influence of developments in the spending process by using Google Classroom in PPKn subjects. Anywhere and anytime. In online shopping situations, students can be able to follow the Google Classroom shopping media with learning outcomes that are able to develop by following the material in PPKn subjects.
