EFFECTIVENESS OF USING STUDENT WORKSHEETS (LKPD) WITH SQ3R METHOD ON LEARNING OUTCOMES OF PARTICIPANTS IN CLASS IV AT SDN KARANG MULYA

(Quasi-Experimental Research on Class IV Students at SDN Karang Mulya in Subang Regency)

By LIA NURMALIAH NPM 185060105

ABSTRACT

This study aims to determine and improve student learning outcomes through the use of LKPD with the SQ3R method. On theme 2, sub-theme 1, the implementation of research in classes IVA and IVB at SDN Karang Mulya. Student Worksheets (LKPD) with the SQ3R method are printed teaching materials in the form of sheets of paper containing materials, instructions, implementation of learning tasks carried out by students referring to the SQ3R method, namely Survey, Question, Read, Recite, and Review. This study uses a quantitative method of Quasi Experiment type. Data collection techniques through interviews and tests. The tests used were in the form of pre-test before being given treatment and post-t-test to collect data on learning outcomes after being given treatment. The object used is class IV A, which consists of 22 students as the experimental class and class IVB, which amounts to 19 students as the control class. The data processing technique used was descriptive analysis, normality test, variance homogeneity test, and two-average similarity test. The results of the data in this study are between the experimental class and the control class. The results of the assessment show that a significant value (2-tail) < 0.05, then Ho is rejected and Ha is accepted, meaning that students' understanding ability when working on LKPD using the SO3R method is significantly better than students working on LKPD who do not use the SQ3R method. So it can be concluded that the LKPD with the SQ3R method has an effect on student learning outcomes, especially class IV.
