ABSTRACK

This study discusses how the simultaneous influence of Gross Regional Domestic Product, Education level (TPEN) on the human development index in West Java Province in 2010 – 2019 How is the Partial Effect of Gross Regional Domestic Product, Education level (TPEN) on the human development index in the Province West Java in 2010 – 2019 For the simultaneous influence of Gross Regional Domestic Product, Education level (TPEN) on the human development index in West Java Province in 2010 – 2019 To determine the partial influence of Gross Regional Domestic Product (GRDP), Education level (TPEN) in the human development index in West Java Province in 2010 – 2019.

In this study, the analytical method used is quantitative data analysis method, data analysis is an activity after data from all respondents or other data sources are collected. Data analysis techniques in quantitative research use descriptive statistics. In analyzing the analysis of the influence of the Unemployment Rate, Labor Force, Economic Growth Rate, and Education Level on the Human Development Index of West Java Province. performed using the Ordinary Least Squares (OLS) method. This analysis is a method used to analyze the relationship between variables. The relationship can be explained in the form of an equation that connects the dependent variable with one or more independent variables. The analysis of this model uses the Eviews 10 computer program tool. 1. Based on the research, a constant result of 14.20900 is obtained which means that if the variables of economic growth, education level and dependency ratio do not contribute or are equal to 0, then the value of HDI (Y) is equal to 14.20900. the independent variable from the times series regression model has a significant effect on HDI (Y) 2. The estimation results of the effect of poverty level on the human development index of West Java province has a coefficient of 1.0397 which means that if GRDP increases by 1%, the HDI will increase with the assumption of other variables considered constant or constant 3. The estimation result of the effect of education level on the human development index of West Java province has a coefficient of 0.671814 which means that if the TPEN increases by 1%, the HDI will increase with the assumption that other variables are considered constant or constant. 4. The results of the estimation of the influence of the Dependency Ratio on the human development index of the province of West Java have a coefficient of 0.008 which means it.

Keywords: Effect of Gross Regional Domestic Product, education Level, dependency Ratio, Human Development Index in West Java.
