

ABSTRACT

This research is entitled Perceptions of Smp Learners in Bandung City on the Implementation of Post-Covid-19 Education. Aims to find out how students perceive face-to-face learning after covid-19.

In this study using descriptive qualitative research methods with the theory of Joseph DeVito which states that the process of forming perceptions is divided into 5, namely stimulation, organization, interpretation, memory, recall. This research uses a qualitative approach, where qualitative research allows research to be described in detail and detail with a narrative writing style. The data and facts found during the research are described descriptively in the form of paragraphs. The purpose of this research is as one of the requirements to take the exam of the undergraduate program (S1) Faculty of Social and Political Sciences, Pasundan University Bandung, Communication Science. In this study using data collection techniques from observation, in-depth interviews, and documentation.

Based on this research, it can be concluded that the perception of students is very diverse because basically each individual has a different mindset and way of capturing. Students who do face-to-face learning after covid-19 mostly feel that learning is better done face-to-face because it is more effective and efficient than online learning.
