ABSTRACT

This study is aimed at improving the learning outcomes of students in SDN 227 North Margahayu school year 2023/2024. Therefore, in order to improve learning outcomes students are conducted learning using visual audio media. The research method used is quasi-experimental research with nonquivalent control group design. This research is aimed at the students of the fourth grade in SDN 227 North Margahayu school year 2023/2024. The total population in the study was 56 students with a total of 28 students in the classes IV-C and 28 in the class IV-D. The data collection techniques used are observation sheets and tests. The data was analyzed by calculating the hypothesis test with the help of the SPSS version 26 application. The results of study showed a picture of the learning process in accordance with the visual audio media, improved learning outcomes of IPAS using visual audio than using conventional teaching. As well as great influence on the learning outcome of student. So it can be concluded that the average in the class experimenting with visual audio is higher than the control class with conventional learning.
