

ABSTRACT

This research is aimed at determining the performance of implementation of village infrastructure development in Bunijaya village, Gununghalu District, West Bandung Regency. Focusing on the implementation performance of village infrastructure development carried out by the Bunijaya Village government office, Gununghalu sub-district, West Bandung regency. Using the Kapioru implementation performance theory approach which has four indicators, namely environmental conditions, inter-organizational relationships, resources and the character of the implementing institution. This type of research uses descriptive qualitative methods. Data collection techniques are carried out through observation, interviews and documentation.

Based on the research results, it is known that the performance of implementation of village infrastructure development in Bunijaya Village, Gununghalu District, West Bandung Regency in the aspect of environmental conditions, in this indicator there are still obstacles in village infrastructure development, namely geographical environmental conditions, because the geographic location is difficult to reach so that development is lacking. optimal, relations between organizations, in this indicator there are and quite good relations with other organizations, the community as a human resource in Bunijaya village still has the character of a lack of initiative in efforts to develop village infrastructure, in terms of organizational cultural climate it is quite good so that there is harmony between several structural positions in the village.

The conclusions of this research are expected to provide insight for the Bandung Regency Land Office in improving the implementation of the PTSL program to be more effective and efficient in providing services to the community and ensuring the fulfillment of land ownership rights fairly and evenly.
