

## **ABSTRACT**

**Jihan Salsabila (2018),** *The Influence of Canva Power Point Learning Media on Student Learning Achievement in Pancasila and Citizenship Education Subjects.*

*The purpose of this study was to examine the causal relationship between the use of Canva Power Point learning media on students' learning achievement abilities at SMAN 4 Subang with a population of class X and a sample of class X IPS 1 as the experimental class group and X IPS 3 as the control class group. The approach used was a quasi-experiment with a research design of "non-equivalent control group pre-test and post-test". The problem studied was the ability of students' learning achievement in using Canva Power Point learning media with a problem-based learning model. The data collection instrument used written tests and non-tests in the form of questionnaires. The results of the study showed that there was a significant influence on students' critical thinking skills in the experimental class group with the control class group. Judging from the results of the hypothesis test using the one sample t test with sig. (2-tailed)  $0.000 < 0.05$ , so it can be concluded that  $H_a$  is accepted and  $H_0$  is rejected.*
